CK FITNESS

CK FITNESS APP

MASTER PLANNING PLAN

Freemium fitness platform + paid membership + AI + community + coaching upsells

Plan objective
Define the business model, phased product roadmap, storage and platform strategy, revenue potential, paid/free feature architecture, coaching upsells, launch logic and scale path for a CK Fitness mobile app. This document is the planning blueprint - not the technical build-out guide.

Decision	Recommendation
Core consumer offer	$29.99 CAD/month membership
Free layer	Onboarding, dashboard, basic tracking, limited community and starter value
Paid layer	Full programs, AI coach, nutrition/calories, accountability, premium community and live sessions
Launch approach	iOS-first, fast MVP; keep Toasted Media CRM as CRM/automation layer
Build philosophy	Five phases; launch revenue MVP first, then compound features without rebuilding the core

Prepared for CK Fitness / Chardikala Fitness & Performance

Version 1.0 | 9 October 2026

Contents

Planning blueprint. A separate technical build-out guide should be created after this plan is approved.

1. Executive Recommendation
2. Product Thesis & Positioning
3. Business Model: Free -> Member -> Coaching
4. App Information Architecture & User Journeys
5. Five-Phase Product Roadmap
6. Phase 1 - Revenue MVP
7. Phase 2 - Community, Live & Coaching
8. Phase 3 - AI Coach, Nutrition & Calories
9. Phase 4 - Personalization, Health Data & Automation
10. Phase 5 - Scale, Ecosystem & New Revenue
11. Storage, Video & Infrastructure Strategy
12. Content Migration Strategy
13. Revenue Potential & Membership Economics
14. Upsell Architecture
15. Toasted Media CRM & Operations
16. App Store, Payments & Approval Strategy
17. Launch & Growth Plan
18. KPI Scorecard & Phase Gates
19. Risks & Safeguards
20. 12-Month Roadmap
21. Immediate Decisions
22. Sources & Assumptions

Strategic principle
The app should not be a prettier Toasted Media CRM portal. It should become the daily CK product: the place members train, track, learn, ask questions, join community, attend live sessions and upgrade into higher-value coaching.

1. Executive Recommendation

Build the smallest app that can generate subscription revenue, then add intelligence and depth only after usage is proven.

CK Fitness already has the ingredients needed for a subscription product: recorded programming, a community-led brand, women-specific education, nutrition/accountability capability, a lead database, premium coaching and a stated strategy to scale digital delivery without proportionally increasing founder hours. The app should unify those pieces into one owned product experience.

Recommendation
Build a five-phase app. Phase 1 must be launchable and monetizable. Do not wait for AI food scanning, wearables, advanced community or deep automation before charging. Launch with a strong free experience and a $29.99/month paid program library, then layer community/live coaching, AI/nutrition, health integrations and scale features.

What changes strategically

- **Today:** CK primarily sells coaching/programs and uses Toasted Media CRM/other tools as delivery and operations infrastructure.
- **Future:** CK owns the customer-facing product. Toasted Media CRM remains the nurture and sales engine behind the scenes.
- **Free users:** become owned leads with daily reasons to return.
- **Paid users:** create predictable recurring revenue.
- **Premium clients:** remain protected through high-touch coaching and studio/hybrid upsells.
- **Chanveer:** moves from answering repetitive questions manually toward scalable group coaching, content and premium intervention.

Critical constraint

Do not put every existing high-touch service into the $29.99 plan. The recorded/self-guided version of a program can live inside membership. Personalized programming, individual accountability, custom nutrition review and high-frequency Chanveer access must stay premium. Otherwise the app will cannibalize CK rather than expand it.

2. Product Thesis & Positioning

The app sells a guided CK system, not a folder of workout videos.

Core promise

Positioning concept
YOUR CK FITNESS COACH IN YOUR POCKET - training, nutrition, accountability, community and intelligent support built around your goals and lifestyle.

The defensible angle is not “AI fitness app.” That category is crowded. CK should lead with women-focused coaching, cultural relevance, practical South Asian nutrition context, trusted programs, community and access to Chanveer’s methodology. AI supports the system; it should not become the brand.

Primary audiences

Audience	Primary problem	Best app entry point
Busy women / mothers	Time, inconsistency, fatigue, lack of structure	Free dashboard -> guided program
Fat-loss / body composition	Random workouts, stalled progress, low structure	Tracking + transformation path
Core / pelvic / postpartum-oriented users	Confidence, foundation, return-to-training questions	Free foundation -> paid progression
Beginners	Confusion and intimidation	Assessment -> recommended beginner path
Punjabi / South Asian women	Generic nutrition/coaching feels culturally disconnected	CK nutrition + community + familiar foods
Existing CK clients	Fragmented tools and WhatsApp dependence	Single app for program, progress, support and upgrades

3. Business Model: Free -> Member -> Coaching

Use free features for acquisition and habit formation; reserve transformation depth and human access for paid tiers.

Layer	Price concept	Purpose	What belongs here
CK Free	$0	Acquisition + daily habit	Profile, onboarding, BMI/basic metrics, water, basic progress, limited community, starter content
CK Membership	$29.99 CAD/mo	Primary recurring revenue	Full program/course library, premium community, structured accountability, live member sessions, nutrition tools, AI features as they launch
CK Premium / Group Coaching	Future: $79-$149+/mo	Higher ARPU without 1:1 load	Small-group accountability, priority Q&A, more Chanveer access, reviews/check-ins
1:1 / Studio / Hybrid	Existing premium pricing	Protect high-value service revenue	Individual plan, human coaching, studio sessions, custom support

Recommended subscription packaging

- **Monthly:** $29.99 CAD - low-friction core membership.
- **Annual:** Introduce after early validation, e.g. about $299 CAD/year to pull cash forward and reduce churn. Final price should be tested.
- **Founder / beta offer:** Optional limited launch pricing for first adopters, but avoid permanently anchoring the product too low.
- **Premium coaching:** Do not bundle unlimited Chanveer time into the $29.99 tier.

Free versus paid rule

Free should be useful; paid should create the transformation
Free = tracking, orientation, community exposure and one meaningful win. Paid = complete structured pathways, full program access, premium community, coaching rhythm, intelligent support and deeper accountability.

4. App Information Architecture & User Journeys

Keep navigation simple enough that a new user always knows what to do next.

Primary tab	Role	Free access	Paid expansion
Home	Daily action hub	Profile, today card, water, weight/measurements	Personalized plan, streaks, weekly score, smart recommendations
Programs	Training library	Preview + starter program	Full CK library and structured pathways
Nutrition	Food and nutrition tools	Basic education / simple targets	Meal logging, macros, photo estimates, meal suggestions
Community	Belonging and accountability	Free channels	Member-only channels, challenges, Q&A
Coach	AI + human upgrade hub	FAQs / upgrade preview	AI coach, live calls, accountability, coaching upsells

Core user journeys

1. Instagram / referral / event lead downloads CK Fitness and creates a free account.
2. Onboarding captures goals, training level, equipment, weight, measurements, schedule, nutrition preferences and relevant safety information.
3. The app recommends a starting pathway and immediately gives a simple dashboard.
4. Free user receives a meaningful starter win and sees paid programs/features clearly but without an aggressive paywall every screen.
5. User upgrades to CK Membership and unlocks the complete program library plus member benefits.
6. The app creates daily/weekly engagement through workouts, tracking, community, reminders and live sessions.
7. High-intent members are routed into group coaching, online coaching, studio/hybrid services or specialty programs.

Visual Product Direction

Reference concept only - final design should be refined during build.

What this visual gets right

The app feels like a consumer product rather than a portal: assessment, daily plan, program discovery, nutrition intelligence, AI support and community all live inside one coherent CK experience.

5. Five-Phase Product Roadmap

Phase 1 and Phase 2 create the commercial product. Phases 3-5 deepen retention, automation and scale.

Phase	Name	Business goal	Headline scope	Indicative timing
1	Revenue MVP	Launchable paid product	Free dashboard + secure program library + $29.99 membership + video + tracking + paywall	1-3 weeks build target*
2	Community + Live + Coaching	Retention and upsell	Free/paid community, live schedule, accountability, challenges, coaching tab, stronger Toasted Media CRM sync	Weeks 3-8
3	AI + Nutrition	Differentiation and support scale	CK AI coach, food logging, calorie/macro estimates, meal guidance, program-aware Q&A	Months 2-4
4	Personalization + Health Data	Habit depth	Apple Health/Health Connect, smart recommendations, progress reports, automated journeys	Months 3-6
5	Scale + Ecosystem	ARPU and market expansion	Premium tiers, Android/global growth, multi-coach, referrals, commerce and partnerships	Months 6-12+

*Timing assumes a disciplined MVP, reusable component library, existing Apple Developer account, content ready to migrate and no major App Review or payment implementation rework. Submission can happen quickly; approval timing is controlled by Apple and is never guaranteed.

6. Phase 1 - Revenue MVP

Objective: ship the smallest credible CK app that can acquire free users and convert paid members.

Must-have user features

- Account creation, login, password reset and account deletion.
- Detailed onboarding: age, gender/preference, height, weight, measurements, fitness level, goals, schedule, equipment, nutrition preference, relevant injury/limitation questions and consent.
- Free Home dashboard with today view, water tracker, weight/measurement tracking and simple progress.
- Programs tab with free previews, one starter/free pathway and locked member library.
- Secure video playback for paid programs with resume position and completion tracking.
- Program structure: program -> week/phase -> workout/lesson -> video/instructions -> complete.
- $29.99 monthly membership paywall and entitlement system.
- Basic push notifications for workouts, hydration, renewal/engagement and new content.

- Profile/settings with privacy, terms, subscription management and support.

Phase 1 admin requirements

- Admin can create/edit programs, weeks, lessons, videos, thumbnails, descriptions, tags and access level.
- Admin can mark content Free, Member, Premium Preview or Hidden.
- Admin can publish/unpublish without an App Store update.
- Admin can see user count, paid status, active program and basic completions.
- New registrations and membership state are pushed into Toasted Media CRM or synced through a light integration.

What NOT to build yet

Defer	Reason
AI food photo recognition	Higher complexity; not needed to prove paid demand
Full AI coach	Requires knowledge base, safety controls and usage economics
Apple Health / wearables	Permissions and edge cases slow MVP
Native live-streaming stack	Use scheduled external/live room integration first
Complex social network	Start with simple channels/feed in Phase 2
Deep gamification	Only add after seeing what actions correlate with retention

Phase 1 success gate
Do not judge Phase 1 by downloads. Judge it by activation and willingness to pay: users complete onboarding, start a program, return in week 1 and convert to membership.

7. Phase 2 - Community, Live & Coaching

Objective: increase retention and ARPU without turning Chanveer into 24/7 support.

Free community

- General CK feed / announcements.
- Wins and introductions.
- Free challenges and selected education.
- Event/bootcamp announcements.
- Member upgrade prompts placed naturally, not spammed into every post.

Paid community

- Member-only program channels.
- Weekly accountability threads/check-ins.
- Nutrition discussion and recipe sharing.
- Member challenges and leaderboards where appropriate.
- Ask CK / member Q&A channels.
- Live-session replays and discussion threads.

Live calls

The $29.99 tier can include scheduled group value, but it should not promise unlimited direct access. Start with a consistent rhythm such as one weekly or two-to-four monthly group sessions. Premium small-group coaching can offer more direct reviews and tighter accountability.

Coaching / Training tab

Card	Purpose	Commercial action
CK Membership	Core recurring subscription	Join / manage membership
Group Coaching	Higher-support tier	Apply / upgrade
1:1 Online Coaching	Premium personalized service	Book consultation / apply
Studio / Hybrid	Local high-value service	Book consultation / request availability
Specialty Programs	Pelvic/core, mobility, performance, etc.	Learn more / buy where appropriate
Live Events / Bootcamps	Local community conversion	Register / reserve

Protect premium pricing
If the recorded 12-week transformation lives inside membership, call it the self-guided version. Human accountability, personalization, progress review and coaching remain a separate paid layer.

8. Phase 3 - AI Coach, Nutrition & Calories

Objective: make the membership feel personalized at scale and reduce repetitive support load.

CK AI Coach

- Program-aware: knows the member's active program, week, completed workouts and declared equipment.
- CK knowledge base: answers from approved CK programs, FAQs, exercise alternatives, nutrition education and brand methodology.
- Profile-aware: can use goals, training level and preferences within appropriate privacy controls.
- Support use cases: missed workout, exercise substitution, schedule disruption, travel, progression questions, protein ideas, program navigation.
- Human escalation: high-risk, injury, pregnancy/postpartum complications, medical or ambiguous issues route to approved guidance rather than confident AI advice.

Nutrition layer

- Daily calorie/protein/macro targets where appropriate.
- Food search and quick-add meals.
- Photo-assisted meal estimates, clearly labelled as estimates.
- South Asian food familiarity: roti, dal, sabji, paneer, chole, rajma, poha, paratha, biryani and other common foods.
- Meal suggestions based on preference (vegetarian/non-vegetarian), target and cultural context.
- Weekly nutrition consistency summary rather than only daily perfection scoring.

AI commercial rule

Keep AI inside the paid membership, with fair-use limits if required. The objective is to increase retention and perceived access - not to let unbounded chat usage destroy gross margin.

9. Phase 4 - Personalization, Health Data & Automation

Objective: make CK increasingly automatic, measurable and hard to replace.

- Apple Health integration for steps and other approved metrics; Android Health Connect when Android launches.
- Smart weekly plan card based on adherence, program position and stated schedule.
- Weekly CK Progress Report: workouts completed, water/protein consistency, measurements, habits and next-week focus.
- Optional progress photos stored privately with explicit consent and deletion controls.
- Adaptive reminders: notify based on missed behavior, not generic repetitive spam.
- Automated win-back journeys for members who stop training for 7/14/30 days.
- Personalized content recommendations and program transitions.
- Referral tracking and member invite rewards.

Retention moat
The more the app understands a member's history, program progress and habits, the less likely the product is to feel like a replaceable video library.

10. Phase 5 - Scale, Ecosystem & New Revenue

Objective: turn CK Fitness into a platform, not simply a subscription library.

Expansion	What it adds	Revenue / leverage effect
Premium group coaching tiers	Smaller cohorts, deeper accountability, live reviews	Higher ARPU with controlled founder time
Multi-coach model	Approved CK coaches can support cohorts	Capacity beyond Chanveer
Android + broader web access	Bigger addressable market	Acquisition scale
International pricing	Localized offers for India / other markets where strategically justified	New markets without new studio footprint
Paid specialty intensives	Time-bound digital challenges or programs	Campaign revenue / reactivation
Partner benefits	Approved nutrition/wellness partners	Member value + possible partnership revenue
Physical commerce	Future CK Fuel / merchandise / event products	Cross-sell outside digital subscription
B2B / community programs	Employers, community groups, organizations	Contract revenue

11. Storage, Video & Infrastructure Strategy

Separate video streaming from general app storage. This avoids bandwidth surprises and makes the library easier to secure and scale.

Recommended high-level stack

Layer	Recommended role	Why
App client	React Native / Expo-style cross-platform app	Fast iOS launch and preserves path to Android without rebuilding conceptually
Database + auth	Supabase-style managed backend	Users, profiles, programs, progress, entitlements, community data
General file storage	Supabase private storage	Thumbnails, PDFs, avatars, progress photos, nutrition images
Video hosting / delivery	Cloudflare Stream	Purpose-built video upload, encoding, streaming, access control and predictable minute-based costs
Subscriptions	Apple IAP + subscription entitlement layer such as RevenueCat	App Store compliance and centralized subscription state
CRM / nurture	Toasted Media CRM	Keep lead pipeline, SMS/email, consultation and sales automation outside the product UI
AI layer	Usage-based AI provider behind CK-controlled prompts/knowledge	Model can evolve without redesigning the consumer app

Why not store all workout videos in normal object storage?

Raw file storage can look cheap, but a fitness library creates repeated streaming, multiple devices, bandwidth spikes and playback needs. A video platform handles encoding, adaptive playback and delivery. Keep the program metadata in your database; keep the actual video stream in a dedicated video service.

Current reference pricing (USD, October 2026)

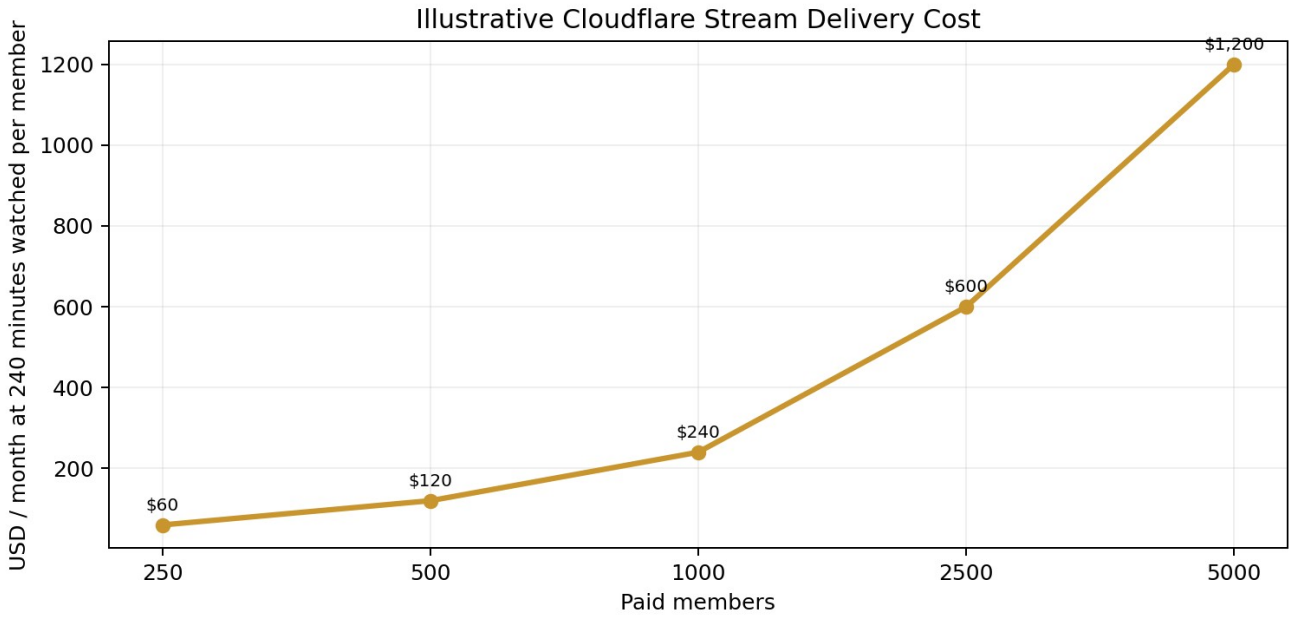

Service	Reference pricing	Planning implication
Cloudflare Stream	$5/month per 1,000 minutes stored; $1 per 1,000 minutes delivered	Library storage is cheap; delivery scales directly with watch time
Supabase Pro	From $25/month; 100 GB file storage; 250 GB egress; 100K MAU listed	Enough for early profiles, images, documents and app data; use Stream for video

Service	Reference pricing	Planning implication
RevenueCat	Free up to $2,500 monthly tracked revenue; then 1% of tracked revenue	Very low startup cost, then scales with subscriptions

Illustrative video economics

Scenario	Stored library	Storage cost	Monthly watch assumption	Delivery cost
Early library	30 hours / 1,800 min	~$10/mo (2 x 1,000-min blocks)	250 members x 240 min	~$60/mo
Growing library	50 hours / 3,000 min	~$15/mo	1,000 members x 240 min	~$240/mo
Large library	100 hours / 6,000 min	~$30/mo	5,000 members x 240 min	~$1,200/mo

These are planning examples, not forecasts. Live-stream delivery, replays, preloading behavior and actual watch time can change usage. Video costs should be monitored per active paid member.

Storage governance

- Keep original master program videos in a separate business archive/backup; the streaming platform is the delivery copy, not the only master.
- Use private access for paid video URLs; do not expose permanent public files.
- Compress member-uploaded progress photos and meal images before storage.
- Use private buckets and signed access for body/progress photos.
- Define retention and deletion rules before collecting sensitive uploads.
- Budget usage alerts so a viral campaign cannot silently create a surprise bill.

12. Content Migration Strategy

Moving the programs is a product operation, not a drag-and-drop exercise.

Content structure

Level	Example	What must be standardized
Program	12-Week Transformation	Title, promise, level, goal, equipment, access tier, thumbnail
Phase / Week	Week 1 - Foundation	Sequence, learning objective, unlock logic
Workout / Lesson	Lower Body Strength A	Duration, instructions, equipment, video, notes
Exercise / Resource	Goblet Squat / protein guide	Technique notes, substitutions, PDF/video/image

Migration order

1. Inventory every existing program and flag current, outdated, duplicate and premium/high-touch content.
2. Decide which programs are Member self-guided versus Premium coached experiences.
3. Rename/standardize program titles, weeks, lessons, thumbnails and descriptions.
4. Upload videos to the streaming layer and create a structured content record for every lesson.
5. Add access rules: Free, Member, Premium Preview or Coach-only.
6. QA every video on mobile, confirm sequence and mark missing assets before launch.
7. Only after the first library works cleanly should additional legacy content be migrated.

Do not migrate clutter
The app should feel curated. If an old Toasted Media CRM program is duplicated, outdated or weak, do not preserve it simply because it exists.

13. Revenue Potential & Membership Economics

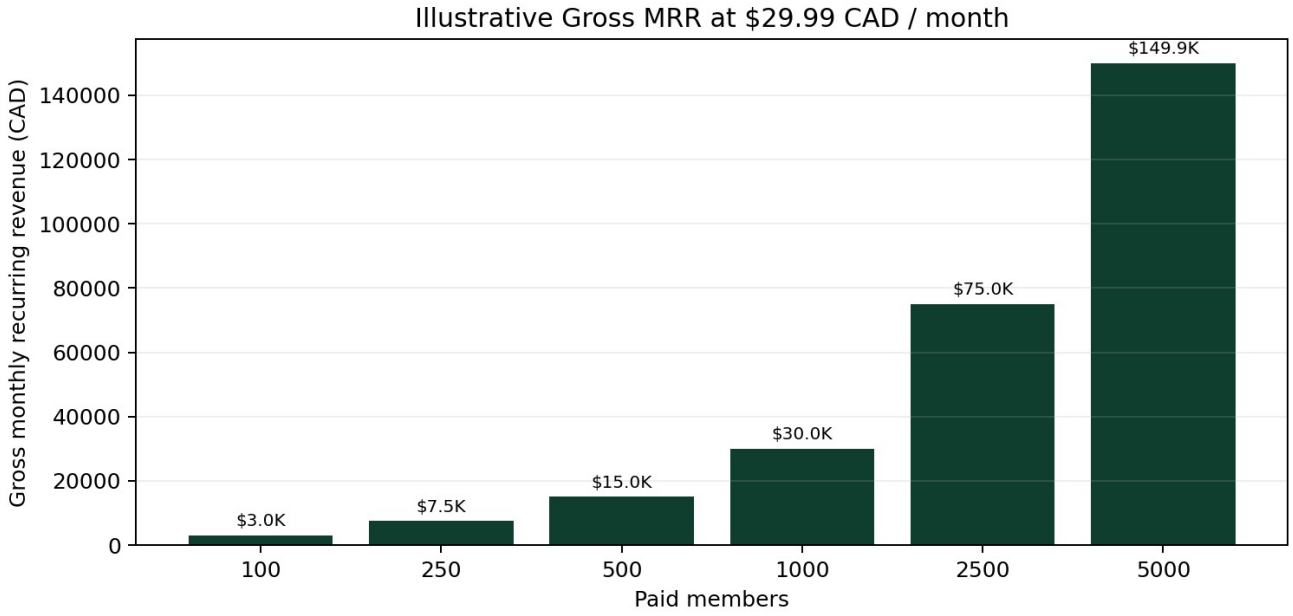

Use subscription revenue as the base, then layer coaching ARPU on top.

Gross membership scenarios at $29.99 CAD/month

Paid members	Gross MRR	Gross ARR	Illustrative MRR after 16% platform layer*
100	$2,999	$35,988	~$2,519
250	$7,498	$89,970	~$6,298

Paid members	Gross MRR	Gross ARR	Illustrative MRR after 16% platform layer*
500	$14,995	$179,940	~$12,596
1,000	$29,990	$359,880	~$25,192
2,500	$74,975	$899,700	~$62,979
5,000	$149,950	$1,799,400	~$125,958

*Illustrative only: assumes a 15% Apple commission where CK is eligible/enrolled in Apple's Small Business Program plus 1% RevenueCat once applicable. Taxes, refunds, infrastructure, FX and web-origin subscribers are not included. If the applicable store commission is higher, net receipts are lower.

Suggested commercial milestones

Stage	Paid-member target	Gross MRR	What it proves
Validation	100	$2,999	People will pay; app is more than a lead magnet
Product-market signal	250	$7,498	Retention + acquisition can create a meaningful revenue line
Business line	500	$14,995	App can rival a local-service revenue stream

Stage	Paid-member target	Gross MRR	What it proves
Scale	1,000	$29,990	Subscription becomes a major CK operating pillar
Platform	2,500	$74,975	Requires serious support, analytics and retention systems
Large scale	5,000	$149,950	Multi-coach, governance and infrastructure become material

Free-to-paid sensitivity

Free active users	Paid conversion	Paid members	Gross MRR
1,000	5%	50	$1,500
2,000	8%	160	$4,798
5,000	10%	500	$14,995
10,000	12%	1,200	$35,988
25,000	10%	2,500	$74,975

Early CK should optimize for paid retention, not maximum free-user volume. A smaller group of engaged women completing programs is more valuable than tens of thousands of inactive downloads.

14. Upsell Architecture

The Coaching tab should be a revenue center, but each offer must match how much human time it consumes.

Offer	App role	Scale level	Suggested placement
$29.99 Membership	Core digital subscription	High	Primary paywall / Programs / Coach
Annual Membership	Cash-flow and churn reducer	High	Paywall and renewal moments
Premium Group Coaching	Higher accountability + Chanveer touchpoints	Medium-high	Coach tab + member milestone prompts
1:1 Online Coaching	Personalized plan and support	Low/limited capacity	Application / consultation
Studio / Hybrid	Local high-value training	Low/limited capacity	Local members / coaching tab
Specialty Intensive	Focused outcome campaign	High if self-guided	Targeted member campaigns
Bootcamps / Events	Community and local acquisition	Medium	Community tab / events
Physical products later	CK Fuel / merchandise / partner products	High	Optional Store in Phase 5

Upsell triggers

- User completes a self-guided program -> offer the next program or group coaching.
- User repeatedly asks AI for personalization -> offer human coaching assessment.
- User misses multiple weeks -> offer accountability upgrade instead of only discounting membership.
- Local Surrey-area member demonstrates high engagement -> surface studio/hybrid option.
- Member reaches a milestone -> offer advanced path, live cohort or referral reward.

15. Toasted Media CRM & Operations

Do not rebuild the CRM inside the app. Let each system do the job it is best at.

System	Owns	Should not own
CK App	Member experience, program progress, community, tracking, AI context, entitlements	Sales pipeline, mass SMS/email, consultation operations

System	Owns	Should not own
Toasted Media CRM	Lead source, nurture, SMS/email, sales stages, consultation, reactivation	Workout experience, program playback, daily tracking
Subscription platform	Purchase status, renewals, entitlements	Program content or CRM notes
Video platform	Secure stream delivery and video analytics	User profile / coaching data

High-value sync events

- New free account -> create/update Toasted Media CRM contact and tag CK APP - FREE.
- Paid conversion -> tag CK APP - MEMBER and start welcome/onboarding automation.
- Cancellation / billing issue -> retention workflow.
- High engagement / coaching interest -> create sales opportunity for human follow-up.
- Inactivity -> app push first; Toasted Media CRM email/SMS only where appropriate and consented.

16. App Store, Payments & Approval Strategy

Two-to-three days is possible for review, but should not be treated as a guaranteed launch SLA.

Apple review reality

Apple currently states a goal of reviewing at least 50% of submissions in less than 24 hours and 90% in less than 48 hours. That makes a fast approval plausible when the app is complete and review-ready, but rejections, subscription configuration, missing privacy details or demo-account problems can extend the timeline.

Digital subscription rule

Because the $29.99 membership unlocks digital features/content inside the iOS app, the safe default is Apple In-App Purchase for purchases initiated in the Canadian iOS storefront. Existing subscriptions purchased on another platform can generally be accessed in a multi-platform service, but the in-app purchase flow and external-link rules must follow current App Review requirements.

Important implementation planning

- Create the auto-renewable subscription in App Store Connect before submission.
- The first subscription must be submitted with the app version for review.
- Provide a working review/demo account and clear App Review notes explaining free versus paid functionality.
- Ensure subscription screen shows duration, renewal price, what is included, restore purchases, Terms and Privacy links.
- If eligible, apply to Apple’s Small Business Program to reduce commission to 15%; enrollment is not automatic.
- Do not design the Canadian iOS app around a Stripe button that bypasses Apple for the digital membership.
- 1:1 real-time person-to-person fitness coaching and physical/off-app services have different payment treatment from one-to-many digital membership content; validate the exact checkout route during the build guide.

Launch advice
Submit Phase 1 only when payment, account deletion, content access, privacy, error states and review credentials are clean. A one-day coding sprint followed by a rejection loop is slower than a two-day QA pass.

17. Launch & Growth Plan

CK has an existing audience and lead base, so the first objective is conversion validation - not cold paid acquisition.

Launch sequence

1. Internal alpha: Chanveer/team test every onboarding path, membership gate and program video.
2. Founding beta: invite 20-50 existing trusted clients/leads; fix friction before broad release.
3. Existing audience launch: Instagram, WhatsApp/database, community sessions and current clients.
4. Free-account campaign: “Join CK free” as the lead-generation CTA instead of pushing everyone directly into a consultation.
5. Paid conversion campaign: show the program library, live member benefits and the next structured path.
6. Retention campaign: publish new member value every month so $29.99 feels alive, not static.
7. Only after retention is acceptable should paid app-install/member acquisition scale materially.

Content loops

Content type	CTA into app	Business purpose
Problem-solving reel	Get the free CK app / starter plan	Acquire owned users
Workout education	Continue the full pathway in CK	Convert to membership
Community proof	Join the free CK community	Social proof / retention
Live-call clip	Members get live sessions/replays	Paid value demonstration
Transformation story	Start your CK path	Conversion / premium upsell
Nutrition content	Track and learn inside CK	Feature adoption

18. KPI Scorecard & Phase Gates

Every new phase should earn the right to be built.

Metric	Phase 1 target logic	Why it matters
Onboarding completion	Aim for 70%+ of account creators	If onboarding fails, everything downstream fails

Metric	Phase 1 target logic	Why it matters
First workout / lesson start	Track within 24 hours	Activation beats downloads
Week-1 return	Cohort by free vs paid	Early habit signal
Free -> paid conversion	Track by source and cohort	Primary monetization proof
Paid month-2 retention	Critical before heavy acquisition	Shows recurring value
Program completion	By program / week	Identifies content friction
Live-session participation	Paid cohort rate	Validates human/community value
Coaching upsell rate	Member -> premium inquiry/sale	Measures app as sales engine
Support tickets / 100 users	Must fall as product improves	Operational scalability
Video minutes / paid member	Monitor value and delivery cost	Links engagement to infrastructure

Recommended phase gates

- Phase 2 begins after Phase 1 is stable and there is real usage data, not simply because the calendar says so.
- Phase 3 AI investment accelerates when repetitive support questions and nutrition use cases are clearly visible.
- Phase 4 health integrations accelerate when members are already tracking manually and asking for automation.
- Phase 5 scale features require proven retention and a repeatable acquisition channel.

19. Risks & Safeguards

The biggest risks are not technical. They are cannibalization, low retention, content clutter, privacy and founder overload.

Risk	What could happen	Mitigation
Premium cannibalization	$29.99 replaces $225+ coaching buyers	Separate self-guided content from human personalization and route high-intent users upward
Static library churn	Users binge then cancel	Ongoing live cadence, challenges, progression, new drops and personalized next-step paths
Founder overload	Chanveer becomes the support desk	Group formats, AI/FAQ, boundaries, premium access tiers and team moderation

Risk	What could happen	Mitigation
AI overreach	Unsafe or misleading answers	Approved CK knowledge, scope limits, human escalation and clear uncertainty
Sensitive data exposure	Measurements/photos leaked or mishandled	Private storage, explicit consent, least access, deletion/export controls and security review
App Store rejection	Launch slips	Use IAP correctly, clear metadata, demo account, privacy/terms, QA and reviewer notes
Feature bloat	Slow launch and fragile product	Hard phase boundaries and KPI gates
Storage/bandwidth surprise	High video/image usage spikes bills	Dedicated streaming, compression, alerts and per-member monitoring

Privacy planning

The app may collect weight, body measurements, progress photos, injury/limitation responses, pregnancy/postpartum-related context and nutrition behavior. Treat that as sensitive information operationally. Before public launch, obtain a privacy/legal review for applicable Canadian/BC requirements, publish a clear privacy policy, collect only what the product needs, and provide account/data deletion controls.

20. 12-Month Roadmap

A fast launch does not require building the final app in the first release.

Window	Product focus	Commercial focus	Primary output
Weeks 1-3	Phase 1 Revenue MVP	Get first paid app members	iOS app + subscription + first migrated programs
Weeks 3-8	Phase 2 Community / Live / Coaching	Improve retention and create upsells	Free/paid community, live calendar, coaching hub
Months 2-4	Phase 3 AI + Nutrition	Increase value and support efficiency	CK AI coach + food/macro tools
Months 3-6	Phase 4 Personalization	Deepen habit and reduce manual operations	Health data, smart reports, automated journeys
Months 6-12	Phase 5 Scale	Increase ARPU and acquisition capacity	Premium tiers, Android/global, referrals, multi-coach / commerce pilots

Year-1 commercial north star
Build toward 500 paid members first. At $29.99/month that is roughly $15K gross MRR before coaching upsells. The next milestone is 1,000 paid members (~$30K gross MRR), but only after month-2 retention and support economics are healthy.

21. Immediate Decisions

Approve these before the separate build-out guide is written.

Decision	Recommended default
Membership price	$29.99 CAD/month
Annual plan	Hold for Phase 2 or early post-launch; test around $299 CAD/year
Free program	Include one high-value starter/foundation pathway plus previews
Existing 12-week content	Member self-guided version; human accountability remains premium
Video platform	Cloudflare Stream or equivalent dedicated streaming layer
Backend	Managed database/auth/storage such as Supabase
CRM	Keep Toasted Media CRM; integrate rather than replace
App platform	Cross-platform codebase, iOS-first release
Community	Simple in-app free/paid channels in Phase 2
Live calls	Group cadence in membership; deeper access in premium tier
AI	Phase 3, CK-grounded and program-aware, not generic chatbot
Health integrations	Phase 4

What the next document should contain

The separate CK Fitness App Build-Out Guide will translate Phase 1 and Phase 2 into exact implementation instructions: screen specs, database schema, user roles, Supabase/video setup, content migration, IAP/RevenueCat, Toasted Media CRM sync, admin, privacy/delete flows, QA, App Store submission and Claude build prompts.

22. Sources & Assumptions

This plan combines CK's V3 operating context with current platform documentation and modelled assumptions.

CK source context

- Chardikala Fitness & Performance - Master Business Understanding V3, dated 27 August 2026. The document identifies app/subscription delivery as part of the scaling roadmap, describes existing programs/community/funnel, and states the strategic priority of growing digital delivery without proportionally increasing founder hours.
- Pricing and offer details from V3 should be revalidated before being hard-coded into the app because V3 itself flags several prices and current counts for validation.

Current platform references checked for this plan

Apple - App Review status / timing: https://developer.apple.com/help/app-review/after-submitting-for-review/review-status

Apple - App Review Guidelines, section 3.1 Payments: https://developer.apple.com/app-store/review/guidelines/

Apple - Configure In-App Purchases for review: https://developer.apple.com/help/app-review/before-submitting-for-review/configure-in-app-purchases

Apple - Auto-renewable subscriptions: https://developer.apple.com/app-store/subscriptions/

Cloudflare Stream pricing: https://developers.cloudflare.com/stream/pricing/

Supabase pricing: https://supabase.com/pricing

RevenueCat pricing: https://www.revenuecat.com/pricing

Important assumptions

- All subscription revenue examples use $29.99 CAD/month and show gross revenue unless explicitly labelled otherwise.
- Infrastructure prices are shown in USD because vendor pricing is published in USD; do not combine them directly with CAD revenue without FX.
- Video cost examples assume 240 minutes watched per paid member per month and are purely illustrative.
- App Review and payment rules can change; re-check official documentation during the actual submission week.
- This is a business/product planning document, not legal, tax, medical or security advice.

Decision requested

Approve the five-phase roadmap and the Phase 1/Phase 2 scope. Once approved, create the separate technical Build-Out Guide and Claude implementation prompts without mixing later-phase complexity into the first release.
